## **Simplex Issues White Paper on Cleanroom Considerations**

Simplex Isolation Systems, a designer and manufacturer of modular cleanrooms and isolation enclosures, has issued a white paper entitled: *What to Know When Considering a Cleanroom*.

"Every day more and more industries are finding that vital parts of their manufacturing and packaging processes need to take place in areas where dust and contamination are controlled," said Duane McKinnon, president of Simplex. "But there is a lack of knowledge and confusion about how cleanrooms work. Our goal is to answer those questions, especially for the manufacturer or plant engineer who is researching cleanrooms for the first time."

*What to Know When Considering a Cleanroom* covers basic areas such as how a cleanroom works, ISO standards for the various grades of cleanrooms, and developing procedures and protocols for the cleanroom. The paper provides a good working knowledge of cleanrooms so these industry professionals can make educated choices.

The paper was developed by the technical staff at Simplex, with the assistance of Richard Matthews of Filtration Technology, Inc., in Greensboro, NC. Matthews chaired the ISO board that developed these standards in 2001.

Founded in 1979, Simplex Isolation Systems designs and manufactures custom cleanrooms that are modular and expandable, as well as a number of products for use in process isolation and contamination control. Simplex products are distributed in the U.S and Canada through a nationwide dealer network. To learn more about the complete line of isolation systems and safety products and solutions from Simplex, call 1-800-854-7951.
