For Immediate Release:

**Simplex ArmorBond Strip Doors Protect
from the Outside to the Inside!**

Armor-Bond strip doors from Simplex offer the ideal solution for better temperature control, protection from the elements, and cross contamination in the warehouse and manufacturing plant setting.

Simplex makes this possible by offering a wide selection of vinyl thicknesses, colors, materials and mounting systems.

For loading docks and freight doors, wider strips and thicker vinyls allow you to design doors that will hold up to heavy forklifts, but remain flexible for foot traffic. Strips quickly fall back into place, allowing for an automatic seal and protection against exterior elements, including weather, birds, insects and other debris.

Inside your facility Armor-Bond Strip Doors in lighter weight vinyls effectively separate different environments, preventing cross-contamination and enabling better control of temperatures.

For more critical applications, Armor-Bond Strip Doors provide an excellent seal for refrigerated facilities, freezer rooms and even sensitive applications such as cleanrooms.

Simplex Armor-Bond Strip Doors are made from clear virgin vinyl. Installation is easy with a minimum of tools. Strips quickly fall back into place, allowing for an automatic seal and protection against exterior elements, including weather, birds, insects and other debris. Also use Armor-Bond Strip Doors to control airflow and cross-contamination inside your facility.

The bonded-bead design also allows you to change out and rotate strips quickly and easily. Strips are reinforced at the mounting point and guaranteed for life not to tear first three inches of strip where stress is the greatest.

To learn more about the complete line of strip door components and solutions from Simplex, call 1-800-854-7951, or visit the Simplex website at www.simplexisolationssystem.com/sdcompare.htm.
